

## Mounting Set FNA 008.1700

FNA 008 · FNA 016 · (FA 014 · FA 016 · FAPC 016)

Mounting set attached to the tank

### Description

#### Operating mode and mounting

The mounting set FNA 008.1700 allows easy connection of the supply and discharge pipe to the tank of the ARGO-HYTOS off-line filter units, provided that there is a connection for a ventilating filter at the tank according to the displayed connection scheme (e. g. for ARGO-HYTOS filling and ventilating filter LE.0716 and LE.0817... 0827).

The mounting set can also be used as service connection for ARGO-HYTOS oil service units, e. g. if hydraulic systems require regular oil cleaning. For this purpose, the mounting set is additionally equipped with adequate hose nipples so that the ARGO-HYTOS oil service units can be easily and quickly connected (in this case we recommend to use the suction strainer set FA 016.1775 for pump protection).

#### Installation of the mounting set

- › Instead of the filling filter, the mounting set FNA 008.1700 is attached to the tank.
- › The off-line filter unit is tubed or piped to the mounting set.
- › The ventilating filter is directly screwed onto the mounting set.
